MANAGED BACKUP SOLUTION

Threats facing SMBs today

- Loss of Data
- Failed Restores
- Costly Upkeep
- Unreliable Systems
- Compliance
- Cost of downtime

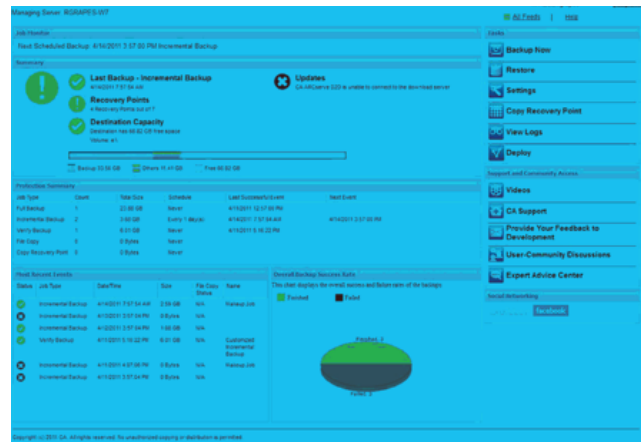

"75% of small and midsize businesses rank data loss as the most significant risk to their business."

Applied Research

What would be the cost to your business if you lost critical data, even for a day?

Your business data is the lifeblood of your company and the amount you are collecting and storing is growing all the time. Imagine the impact if you lost a day's data, a week's data, a year's data, due to inadequate or infrequent back-up processes. What would happen, could you recover?

A managed backup service from TDAV ensures that all files are automatically backed up as frequently as every 15 minutes if needed. And it will likely cost less than you think. So, how much is **your** data worth?

Key Features

Block level Infinite Incremental backup

TDAV technology means never having to do another full backup drastically reducing the backup time, storage space, network traffic, and the workload of your servers.

Recover your data to dissimilar hardware

Can perform a bare metal restore of your data to dissimilar hardware. You don't have to worry about purchasing that new server anymore!

Virtual server support

Backup your virtual servers with the same software that you use to back up your physical servers.

Supreme flexibility

Recover your data from nearly any point in time. Whether it is just one file or a full restore.

Full Transparency Through Reporting

Wide range of detailed reports are provided monthly to ensure that you know what is happening and that you can breathe easy knowing that your data is protected.

Fully Monitored System

We monitor the software to ensure it is always working, and will act immediately if there is an issue

Benefits of a Managed Backup

- **Reduce your day to day operating costs**
While most solutions require full backups periodically or in some cases daily, our solution only requires an initial full backup then from that point stores only incremental file changes. Saving you money in storage space, data transfer costs and server load.
- **Safeguard business information**
Since the solution takes backups in terms of changes, you will be able to recover files, even older revisions.
- **Ensure Business Continuity**
Backup up your most critical business applications to ensure that you can get quick access to restore systems that would have the most impact to your day-to-day operations if they were down.
- **Increase productivity and decrease downtime**
With our rapid restore capabilities, we will minimize the costs associated to lost productivity and downtime.
- **Detailed reporting Information**
No longer will you be unsure of how well your data is protected. We will provide you with reports monthly that let you know that your data is safe!
- **Total Peace of Mind**
Doing regular backups is just one more thing to remember. Knowing that your business data is safe and being handled by expert's means you can focus on your business.
- **Low cost of ownership**
A fully managed data backup and restore solution for the same or less than a capital purchase you have to manage yourself.

Why our clients choose our Managed Backup Solution

Device Lifestyle Management

Reduced Costs

- Less storage space required
- Less bandwidth needed
- Recover to dissimilar hardware if needed

Improved productivity

- Back up more data in less time
- Minimize downtime with faster restore times
- Restore a single file or a complete volume from any point in time you have data backed up

Increased awareness

- Backups are monitored so you are alerted if there is a problem
- Detailed monthly reports on backup status

Increased confidence

- Regular backups minimize business downtime in the event of a data loss
- Backups are always scheduled and managed by experts

"47% of business owners directly link lost revenue to data loss and acknowledge they have inadequate data backup procedures"
