Is your network like a Leaky Bucket?

Confident that your business is protected?

Patch management vulnerabilities may just be the tip of the iceberg!

There seems to be a report of a new software vulnerability being uncovered every day. Software vendors act quickly to rectify these issues, but fixes take time to apply, and may require critical systems be taken down, so those necessary fixes get pushed out further and further.

Peace of mind plus more! A Vulnerability Assessment also provides a detailed report on exposed vulnerabilities and other issues on every device in your network, along with resolution recommendations from our professional engineers.

Benefits of a Vulnerability Assessment

- **None intrusive**
  TDAV performs a scan of your entire network without interrupting your day-to-day business or device operation. The environment is assessed, capturing established security controls along with any vulnerabilities or configuration violations that impact the network.

- **Prioritize what's important**
  Following the assessment, a detailed report provides high/medium/low rankings of vulnerabilities that have been identified enabling you to address the most critical issues first to secure your environment.

- **Address issues quickly**
  In addition to prioritizing problems the assessment also provides prescriptive advice to assist in remediating the found issues. This helps to accelerate the time to address identified issues. It’s like having your own consultant, at a fraction of the cost!

- **Reduce operating costs**
  A security incident can paralyze your business. Identifying and removing this risk will save you money!

- **Total peace of mind**
  Knowing that your network is protected from the latest known vulnerabilities and you are partnered with team of experts that can protect your network 24/7 provides you the peace of mind you deserve.

Threats facing SMB’s Today

- Browser vulnerabilities
- Operating system updates
- Configuration settings
- Network viruses
- Open firewall ports

Vulnerability Assessment Key Features:

**Industry Leading software**
Knowing you are protected from the latest known vulnerabilities with intelligently updated audits database that include a 48-hour SLA for critical vulnerabilities

**Prioritize and streamline remediation**
Risk scoring and prescriptive guidance on issues through executive and task specific reporting speeds time to repair issues

**Vulnerability landscape**
Goes beyond application security identifies patch, configuration, hardware and operating system level vulnerabilities

**Comprehensive Reporting**
Detailed reports provide prescriptive guidance and recommendations to ensure that corrective action can be taken in a timely fashion

**Support and guidance**
The assessment is the starting point. Security, configuration and compliance are always changing. We ensure your IT assets and infrastructure are protected
